

Virtual Reality Memory Study for Older Adults

Research study exploring brain structure and function
in response to virtual reality memory tasks

RECRUITMENT

- ▶ Seeking older adults ages 65-85 with or without mild memory problems

PARTICIPATION

- ▶ Multiple sessions of brain imaging and behavioral assessments at Stanford University
- ▶ Engage in virtual reality-related memory tasks
- ▶ The study will require approximately 4 hours of your time
- ▶ Participants will receive an honorarium of \$100 for full participation

BENEFITS

- ▶ Help increase knowledge of brain function during memory tasks
- ▶ Access brain scans and cognitive assessment results collected during your visit
